Create a time-entry application in Django and database of your choice.

- As a user, I should be able to register with my name, username, email, etc.
- As a user, I should be able to log my time entries for a task with the following fields.
  - Input field to enter task name.
  - A dropdown to choose the project that I am working on.
  - Start time and end time.
  - A timer which I can start to track time for a task.
- As a user, I should be able to browse through my time entries of previous days.
- No other features are required.
- Time entries should be saved in the database.

Points of evaluations:

1. Feature completion.
2. Code modularity, reusability and structuring
3. Design principles.
4. Error handling

Additional points(optional):

1. Clean UI
2. Documentation
3. Hosting
